All Labels

- CASE Flow Control Create a conditional construct
- COMMENTS Comment Create a comment
- Customize Result Tab M To name the result tab generated executing the statement.
- IF_ELSE Flow Control Create a IF...ELSE... construct
- INSERT Syntax DML Insert new rows into an existing table
- LOOP Flow Control Create a simple loop construct
- REPEAT Flow Control Create a REPEAT construct. The statement list is repeated until the search, condition expression is true.
- Runtime Parameter Non-Business parameters to be replaced when the statements are executed. Named by then will pop a dialog for you to input value.
- SELECT Syntax DML Retrieves rows selected from one or more tables
- UPDATE Syntax DML Updates columns of existing rows in the named table with new value
- WHILF Flow Control

The screenshot shows the DBeaver SQL editor interface. The top toolbar includes icons for Connection, New Query, Table, View, Function, User, Others, Query, Backup, Automation, Model, and BI. The left sidebar shows the 'My Connections' tree with 'finalproject' selected. The main editor displays a SQL query: `SELECT * FROM enrollment WHERE Status = 'Registered';`. The bottom pane shows the query results in a table with columns: EnrollmentID, StudentID, SectionID, Grade, EnrollmentDate, and Status. The results show 19 rows of data. The right sidebar contains a 'Messages' pane and a 'SQL Editor' pane with various SQL snippets like CASE, COMMENTS, Customize Result, IF...ELSE, INSERT Syntax, LOOP, REPEAT, Runtime Parameter, SELECT Syntax, UPDATE Syntax, and WHILE.
